

Data Center Engineering

End-to-End Solutions for Mission-Critical IT Environments

SV Tech Source delivers end-to-end data center services designed to ensure optimal performance, security, and scalability for mission-critical IT environments. Our solutions support every phase of your data center lifecycle—from design and cabling to migration and decommissioning.

Data Center Engineering

Network Equipment & Cabling

SV Tech Source ensures your bandwidth, latency, cost, and scheduling requirements align with business goals. These services cover the full installation, management, and optimization of physical networking systems for high reliability and efficiency.

- High/Low-Speed Copper Cabling (DAC, Cat6, Cat6A, and Cat7)
- Fiber Optic Structured Cabling
- Transceivers for All IT Hardware Manufacturers
- High-Performance Interconnects
- MTP/MPO Cable Assemblies
- Modular and Fixed Patch Panel Systems

Data Center Engineering

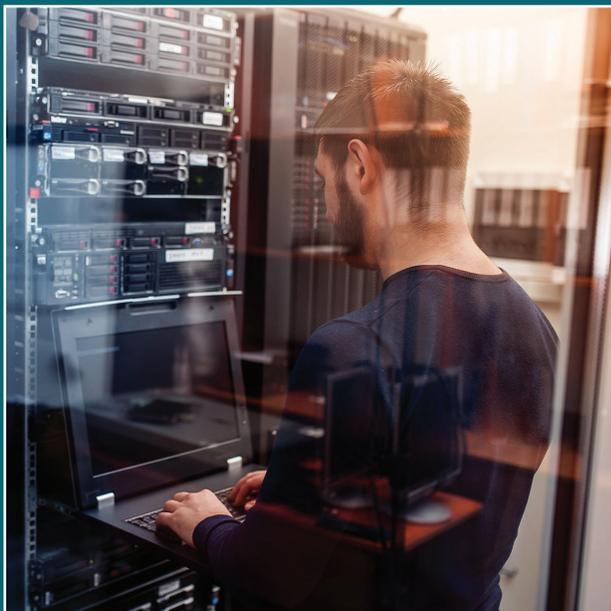

End-to-End Solutions for Mission-Critical IT Environments

Data Center Implementation

SV Tech Source data center support includes infrastructure management, project planning, and ongoing operations support—delivered with security and business continuity in mind. We also specialize in secure decommissioning, ensuring all data is thoroughly protected and removed from legacy systems before disposal.

- Data Center Moving & Consolidation
- Virtual Migration
- Project Planning and Management
- Network Security
- Network Design and Implementation
- Ongoing Support

Data Center Migration

SV Tech Source manages the entire process strategically to minimize disruption and ensure security. Whether moving to a new facility, consolidating infrastructure, or transitioning to cloud-based systems, our team ensures a smooth and compliant migration process.

- Planning and Assessment
- Strategy Development
- Data and Application Preparation
- Migration Execution
- Post-Migration Activities
- Documentation and Review
